The LabVIEW FPGA course prepares you to design, debug, and implement efficient, optimized applications using the LabVIEW FPGA Module and reconfigurable I/O (RIO) hardware. You learn how to compile and deploy your VIs to different types of NI targets, such as NI R Series multifunction RIO, CompactRIO, Single-Board RIO, and NI RIO instruments.

I was recently taking a LabVIEW RT and FPGA Training after a long gap of 3 years. I realised a lot has changed in the course for good. While I was doing a few excercises, I found that the information mentioned in the manual is slightly erroneaous. Just wanted to check, if someone else has also found this or I have done something stupid.

This is a list of the objectives of the course. This course prepares you to do the following: 

- Use LabVIEW to create applications.
- Understand front panels, block diagrams, and icons and connector panes.
- Use built-in LabVIEW functions.
- Create and save programs in LabVIEW so you can use them as subroutines.
